EX.NO. 9 **Roll no: 210701284**

HADOOP DEMONSTRATE THE MAP REDUCE PROGRAMMING MODEL BYCOUNTING THE NUMBER OF WORDS IN A FILE

AIM:

To demonstrate the MAP REDUCE programming model for counting the number of words in a file.

PROCEDURE:

Step 1 - Open Terminal

$ su hduser

Password:

Step 2 - Start dfs and mapreduce services

$ cd /usr/local/hadoop/hadoop-2.7.2/sbin

$ start-dfs.sh

$ start-yarn.sh

$ jps

Step 3 - Check Hadoop through web UI

// Go to browser type http://localhost:8088 – All Applications Hadoop Cluster

// Go to browser type http://localhost:50070 – Hadoop Namenode

Step 4 – Open New Terminal

$ cd Desktop/

$ mkdir inputdata

$ cd inputdata/

$ echo “Java Dart Java Hello World” >>input.txt

$ cat>> input.txt

Step 5 – Go back to old Terminal

$ hadoop fs –copyFromLocal /home/hduser/Desktop/inputdata/input.txt

/folder/hduser // Check in input.txt in Namenode using Web UI

Step 6 – WordCount Program

- Mapper.py
- Reducer.py

Mapper.py

```
#!C:/ProgramData/chocolatey/bin/python3.ex
e import sys for line in sys.stdin: line =
line.strip() words = line.split() for word in
words:
    print('%s\t%s' % (word, 1))
```

Reducer.py

```
#!C:/ProgramData/chocolatey/bin/python3.ex
e import sys prev_word = None prev_count =
0 for line in sys.stdin: line = line.strip() word,
count = line.split('\t') count = int(count)
if(prev_word == word):
    prev_count += count
  else:
    if prev_word:
      print('%s\t%s' % (prev_word, prev_count))
    prev_count = count
prev_word = word if
prev_word == word:
print('%s\t%s' %
(prev_word,
prev_count))
```

OUTPUT:

```
C:\>hadoop
Usage: hadoop [--config confdir] [--loglevel loglevel] COMMAND
where COMMAND is one of:
  fs                   run a generic filesystem user client
  version              print the version
  jar <jar>            run a jar file
                       note: please use "yarn jar" to launch
                             YARN applications, not this command.
  checknative [-a|-h]  check native hadoop and compression libraries availability
  conftest             validate configuration XML files
  distch path:owner:group:permisson
                       distributed metadata changer
  distcp <srcurl> <desturl> copy file or directories recursively
  archive -archiveName NAME -p <parent path> <src>* <dest> create a hadoop archive
  classpath            prints the class path needed to get the
                       Hadoop jar and the required libraries
  credential           interact with credential providers
  jnipath              prints the java.library.path
  kerbname             show auth_to_local principal conversion
  kdiag                diagnose kerberos problems
  key                  manage keys via the KeyProvider
  trace                view and modify Hadoop tracing settings
  daemonlog            get/set the log level for each daemon
 or
  CLASSNAME            run the class named CLASSNAME

Most commands print help when invoked w/o parameters.
```

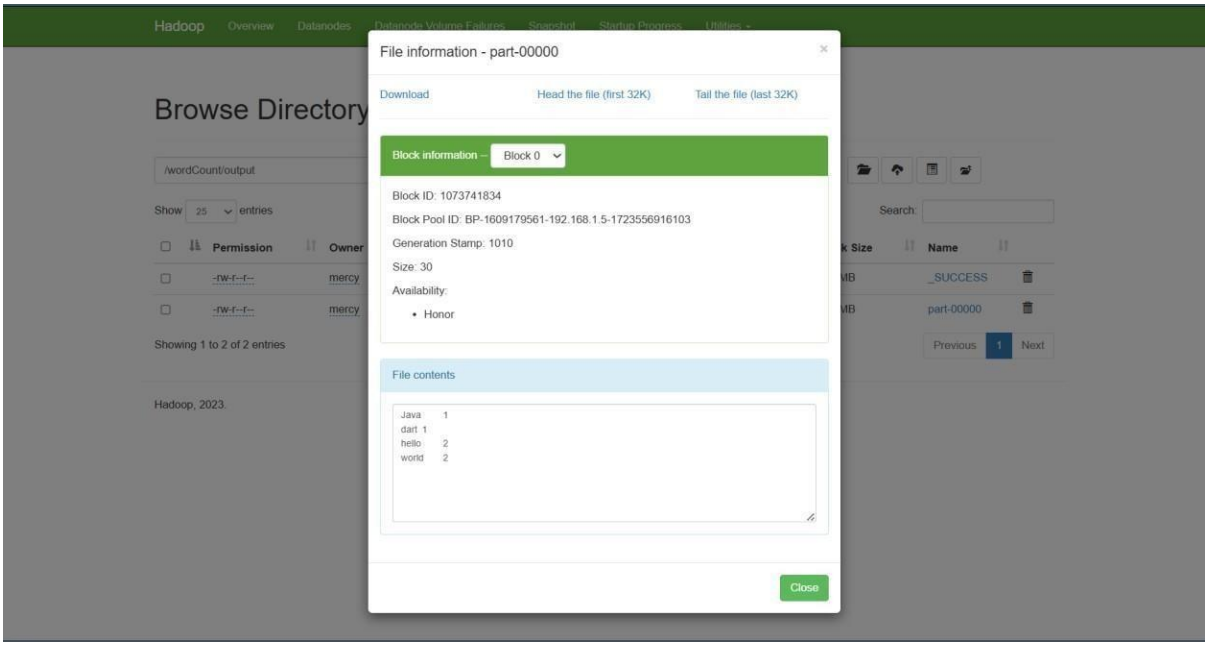
```
C:\>hadoop version
Hadoop 3.3.6
Source code repository https://github.com/apache/hadoop.git -r 1be78238728da9266a4f88195058f08fd012bf9c
Compiled by ubuntu on 2023-06-18T08:22Z
Compiled on platform linux-x86_64
Compiled with protoc 3.7.1
From source with checksum 5652179ad55f76cb287d9c633bb53bbd
This command was run using /C:/hadoop-3.3.6/share/hadoop/common/hadoop-common-3.3.6.jar
```

```
C:\>start-all.cmd
This script is Deprecated. Instead use start-dfs.cmd and start-yarn.cmd
starting yarn daemons
```

```
C:\>jps
19572 ResourceManager
19972 NodeManager
7028 NameNode
360 Jps
15628 Eclipse
19468 DataNode
```

```
C:\>hadoop fs -cat /wordCount/output/part-00000
Java    1
dart    1
hello   2
world   2

C:\>
```



RESULT:

Thus the implementation of the python mapper and reducer programs using MapReduce to count the words in a text file using Hadoop is executed successfully.
